

**AMENDMENTS TO THE CLAIMS****Claims 1-10 (canceled)**

**Claim 11 (currently amended):** A snap together arrangement comprising:

a plurality of structural elements, each structural element comprising a panel cover at each corner and an elongated member extending between adjacent corners to form a four-sided frame;

a plurality of panel covers;

each of said panel covers panel cover having at least one pair of latch and catch supported on said panel cover covers, said catch with elongated deformable slot walls having a length and being substantially rigid and having adequate memory and elasticity to deform and snap back and said latch with an enlarged elongated head having a length substantially similar as the length of the slot walls, said catch and latch extend at a fixed angle relative to each other and wherein in an assembled state, said catch snaps into engagement with a latch of an adjacent corner panel cover in the transverse direction of said elongated deformable slot walls of said catch and the latch and the catch combination being firmly mated with each other;

said panel cover further comprising mounting guides having at least one elongated member cavity to receive an end of an elongated member;

at least two structural elements each comprising four panel covers each affixed to an elongated member forming a four-sided frame through which a first edge of a first structural element is connected by at least one panel cover to a panel cover on a first edge of a second structural element to form a substantially right angle between the first structural element and the second structural element, through which the first structural element and second structural element form a 2-sided arrangement; and

a third structural element, through which a first edge of the third structural element is connected by a panel cover to a second edge of the second structural element to form a substantially right angle between the second structural element and the third structural element, through which the first structural element, the second structural element, and the third structural element form a 3-sided arrangement.

**Claim 12 (canceled)**

**Claim 13 (previously presented):** The snap together arrangement of Claim 11 further comprising of a fourth structural element, through which a first edge of the fourth structural element is connected by a panel cover to a second edge of the third structural element to form a substantially right angle between the third structural element and the fourth structural element, and; through which a second edge of the fourth structural element is connected by a panel cover to a second edge of the first structural element, through which the first structural element, the second structural element, the third structural element, and the fourth structural element form a 4-sided arrangement.

**Claim 14 (currently amended):** The ~~panel cover~~ snap together arrangement of claim 11, wherein at least one of said panel covers comprises a stop through which movement of attached panels along the length of the slot walls is limited to maintain the latch and the catch combination.

**Claim 15 (canceled)**

**Claim 16 (currently amended):** The ~~structural element~~ snap together arrangement of claim 11 wherein said structural element is selected from the group consisting of a metal frame, a wood frame, a rattan frame, a wicker grid, a wicker frame, a metal sheet, cardboard, foam, fiberboard, wood and a metal grid panel.

**Claim 17 (canceled)**

**Claim 18 (currently amended):** The ~~structural element~~ snap together arrangement of claim 13 wherein said structural element is selected from the group consisting of a metal frame, a wood frame, a rattan frame, a wicker grid, a wicker frame, a metal sheet, cardboard, foam, fiberboard, wood and a metal grid panel.

**Claim 19 (canceled)**
